Noteworthy

Social Media Reimagined

The Motivation

- A main feature of social media is the ability to share online media with people.
- The main mechanism for sharing webpages through social media is the hyperlink.
- **Noteworthy** is a social medium that allows you to interact with people anywhere you go on the web.

Our Goals

1) Build a browser extension that allows people to create notes and see their friend's notes on the web.

2) Design a centralized hub for viewing notes and managing your account.

3) Create a seamless experience between the browser and the central hub.
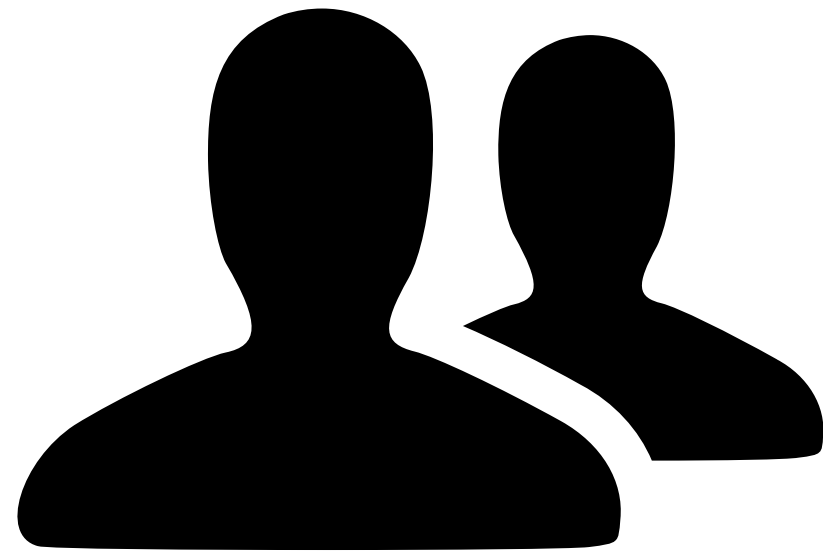

The Design

- Notes are the main unit of our application, and require organization.
- We organize them into **Collections**, which mimic a file system.
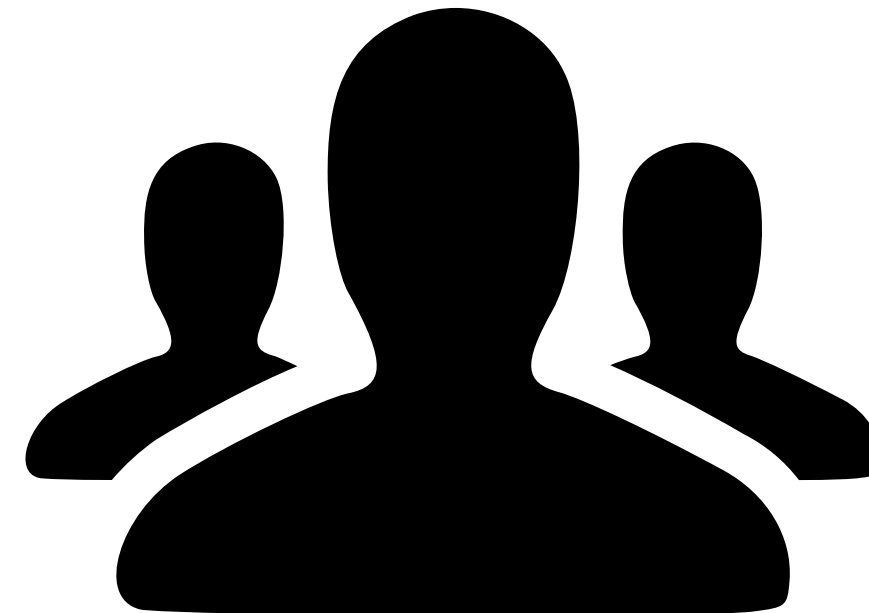

The Design

The Design ························· *Social Interaction*

- There are two main methods of social interaction with **Noteworthy**:

Friends

Groups

The Design ·············· *Social Interaction*

- **Friends** allow users to share their public notes with other users.
- **Groups** provide shared access to a set of collections.

The Design .... *Usage*

- **Noteworthy** is designed to work seamlessly between the central hub and on the extension.
- Users can see their notes, their friends' notes, and their shared group notes on the web through the browser extension.
- This turns the whole Internet into a canvas for social activity.
